

Assessment Criteria

Assessment Criteria

Reasons for returning the project:

- The file was empty
- The cells containing code are in the wrong order
- When changing the content of the project, the logical structure wasn't respected
- Not all steps/points of the project were completed

Note:

The messages are suggestions and can be changed.

1. Data Overview

Step 1

Criterion:

▼ Excellent

Chosen answers 1, 3 and 4

1. There's no need to change the `user_id` variable, as we
3. What would be the correct data type for the variable `us`
4. We also see no reason to keep the values in the list in

▼ Acceptable (could have been better)

Chose any two of the three right answers.

- ```
1. There's no need to change the user_id variable, as we
3. What would be the correct data type for the variable us
4. We also see no reason to keep the values in the list in
```

▼ Poor

Chose only one right answer, or chose the 2nd answer.

```
IDs are simply unique identifiers for users on the website
```

## Step 2

**Criterion:** Used strip and replace methods

▼ Excellent

Used both strip and replace methods

```
Well done. Let's keep going!
```

▼ Acceptable (could have been better)

Used just one of the methods, or used something else without mentioning these methods.

▼ Poor

Didn't use any of the methods.

```
To solve this you need to use both the strip and the repla
```

## Step 3

**Criterion:** Used the split() method

▼ Excellent

Used the split method.

```
You got it! It's great to have the first and last names as
```

▼ Poor

Didn't use the split method.

#### Step 4

**Criterion:** Converted to int using the int() function.

▼ Excellent

Used the int() function.

```
The age is now correct! What is next?
```

▼ Poor

The student didn't use the int() function

#### Step 5

**Criterion:** Use try and except to catch errors.

▼ Excellent

Used try and except. Provided the proper error message. Used int() to convert the string.

▼ Poor

Some other method (or methods) is used to print the information.

```
Use try and except to catch the error and print the inform
```

#### Step 6

**Criterion:** Used the sort() method.

▼ Excellent

Used the sort() method.

```
The list is sorted now! What is next?
```

▼ Poor

The student didn't use the sort() method

## Step 7

**Criterion:** Summed the three spendings and provided the right result.

▼ Excellent

The sum is correct.

▼ Poor

The answer is incorrect.

## Step 8

**Criterion:** create a formatted string

▼ Excellent

Used f\_strings, the format() method or concatenation of strings and variables.

```
Great! Now we have an approach to display brief informatio
```

▼ Poor

Didn't use any of the methods.

## Step 9

**Criterion:** create a formatted string and used the len() function

▼ Excellent

Used f\_strings or the format() method, and the len() function.

Great! Now we have an approach to know information about t

▼ Poor

Didn't use any of the methods and function.

## Step 10

**Criterion:** Cleared all the users. Used strip() and replace() methods, converted age to int, and populated the new list with append().

▼ Excellent

Used strip() and replace() methods, converted age to int, and populated the new list with append().

Now we have data on three users ready for further analysis

▼ Acceptable (could have been better)

Got the result some other way. For example, using a for loop instead of repeating code.

▼ Poor

Didn't get the right result, didn't use the methods.
